

## Reconstructing Histories of Nature Conservation in California: 1850-2010 [pt ]

Maria J.Ferreira dos Santos <maria\_dot\_j\_dot\_santos\_at\_geo\_dot\_uzh\_dot\_ch>, Department of Geography, University of Zurich

### Abstract

This paper addresses the experience of the author when developing a digital platform on the history of nature conservation in California from 1848. This digital platform is designed to showcase, allow exploration and knowledge transfer as well as ask new questions and place new hypotheses on the history of conservation, for a state pioneer in these themes. The natural resource values of California along with the entrepreneurship allowed for an early start of nature conservation in the state. These ideas of conservation soon were brought into legislation, governmental action and processes, and population awareness and behavior. However, the development of the conservation history was not without barriers, as nature conservation has been challenged by development processes, namely exponential population growth and urban fabric, and the growing need for land use management that met the needs from different sectors. The Project herein described is based on the need to showcase the history of conservation in California, visualize its development over time, and analyze socio-economic and environmental drivers of its development over the last 160years. This article is therefore of importance as it contributes to broadening and deepening the discussion along the challenges brought about by urban and population development. The digital platform described herein is therefore innovative and fundamental to further stimulate new questions at the interface of history and many other disciplines.

### Note on Translation

For articles in languages other than English, DHQ provides an English-language abstract to support searching and discovery, and to enable those not fluent in the article's original language to get a basic understanding of its contents. In many cases, machine translation may be helpful for those seeking more detailed access. While DHQ does not typically have the resources to translate articles in full, we welcome contributions of effort from readers. If you are interested in translating any article into another language, please contact us at [editors@digitalhumanities.org](mailto:editors@digitalhumanities.org) and we will be happy to work with you.
